

# A

## AUSTRALIA

Because **AUSTRALIA** is an island, many animals that inhabit other countries aren't found here. 80% of mammals and reptiles found in Australia don't live anywhere else.

Australia has no native **SALAMANDERS**. Squirrels, porcupines, and beavers are also not native to Australia.

**DINGOS** and echidnas can each be found in one other country, but koalas and wombats are native only to Australia.
